ABOUT EXTREME ABRASIVES

Based in Ontario, Canada, Extreme Abrasives was founded in 2004 with a commitment to providing quality and cost-effective solutions for metal finishing. Since then we have expanded our manufacturing and established strategic partnership with other companies in abrasive industry. Today we offer a variety of products to satisfy any and all abrasive needs from constriction to metal and wood finishing.

We are proud of our expertise in the abrasives industry. Our experienced and knowledgeable staff caters the needs of every customer by offering our impressive selection of products, competitive prices and unmatched technical support. In addition, our products are manufactured using only the highest-quality components from around the world. We are a customer-oriented company that is always ready to provide you with products that are:

- Tailored to meet your specific requirements
- Of the highest quality and standards
- Competitively-priced and affordable

OUR MISSION

It is our mission to help our customers maintain manufacturing in North America by focusing on the following goals:

- Maintain a diverse product selection
- Manufacture as many products as possible at our factory in Canada
- Use the top quality components and the efficient manufacturing process
- Provide dependable service to all customers
- Provide a fulfilling environment to our employees

It is our commitment to these goals that makes working with us an enjoyable experience from start to finish. We look forward to helping you achieve success in your endeavors.

SAFETY

All machines that use coated products can be dangerous and cause serious injury if they are not properly used and if safety procedures are not followed. Although maximum speeds are provided for each product, it is highly recommended that you use speeds recommended by the power tool manufacturer. Do not use sizes other than those for which the power tool is designed for! Abrasives deliver best performance when used in normal room temperature and humidity. Excessive temperature and humidity can cause abrasives to fail. Use extra caution when grinding in extremely cold or hot conditions.

SAFETY INSTRUCTIONS

- Eye protection must be worn by all operators and other personnel in the grinding area
- Wear a dust and fumes mask
- Do not exceed maximum operating speeds
- Store abrasives under the manufacturer's recommendation conditions
- Make sure that you are using proper abrasive tools for your application
- Never modify abrasive tools from its original form
- Keep all safety guards in place
- Read all instructions provided by the manufacturer before operating
- Observe and follow safety instructions for the intended work area
- Safe use of abrasives requires strict adherence to the guidelines set in ANSI standard Z87.1 "Occupational Eye and Face Protection"

MANDATORY PICTOGRAMS

	Use for face grinding		Only permitted with back-up pad		Wear eye protection. Minimum protection level of EN 166 Grade B recommended.
	Wear ear protection complying with EN 352 recommended for all applications where the workpiece or machine is hand-held, irrespective of the noise level.		Wear a dust mask complying with EN149 recommended for dry grinding processes even if extraction systems are provided		Read the instructions
	Wear gloves. Minimum protection level of EN 388 Category 2 recommended.		Use face shield		Wear an apron

PROHIBITION PICTOGRAMS

	Not suitable for wet grinding		Not permitted for hand-held and manually guided grinding		Not permitted for face grinding		Do not use if damaged
--	-------------------------------	--	--	--	---------------------------------	--	-----------------------

OPERATING INSTRUCTIONS

- Read safety instructions before using abrasives
- Allow tools to reach operating speed before you start grinding
- For best results, grind at an angle recommended for the type of disc that you are using
- More grinding pressure results in aggressive grinding while less pressure produces a smoother finish ; in other words, do not use excessive pressure when grinding.
- Do not use excessive pressure when grinding
- Using grinding angles greater than which is recommended and/or grinding corners can cause premature and uneven wear
- When grinding keep the power tool in motion for best results

MAXIMUM OPERATING SPEEDS

All the abrasive discs are supposed to be used at the maximum speed shown on the labels and packaging. The color of the central stripe changes according to the maximum peripheral speed allowed. Blue (50 m/s), Yellow (63 m/s), Red (80 m/s), Green (100 m/s). The maximum speed is shown both in rpm and m/s. Never exceed the speed shown on the label.

MIRROR CUT SMALL DIAMETER UNITIZED WHEELS

High density unitized wheels are a combination of several layers of non-woven abrasive material compressed and impregnated with resin. Other grades, diameters and thicknesses are available. These wheels have been developed for cleaning and finishing operations and they are highly conformable while maintaining durability. They will not contaminate work surface. They can be installed on normal portable electro-tools or with an extension arm in order to reach the most difficult areas.
